Thursday, September 12, 6:00 pm  
1311 Newmark Civil Engineering Lab

Informational Meeting

Come learn about ACI@UIUC! The American Concrete Institute (ACI) is a national technical and educational society created in 1904 and is a leading authority on concrete technology. The ACI student chapter at UIUC was founded in 1993 and is affiliated with the ACI Illinois Chapter. Our members include undergraduate and graduate students with an interest in concrete. We organize monthly meetings to discuss general business and invite industry and academic speakers to share their latest research findings, fascinating construction projects, or any other topic that relates to concrete and its use. The chapter also participates in student competitions at ACI’s bi-annual national conventions.

We will be discussing a number of topics including speakers for this semester, student competitions, and the ACI Convention in October in Phoenix, AZ.

The mission of the ACI-UIUC Student Chapter is to promote student interest in concrete and to develop an awareness of the mission and the work of the American Concrete Institute through its committees, publications, and chapters.

Anyone interested in concrete is invited! We will provide pizza and beverages before the meeting. See you there!
