Sagar Poshan, a dairy based lipid nutrition supplement (LNS) was developed to supplement food based interventions using staple ingredients from Indian families to improve its acceptability, and thus maximising delivery yield. It was formulated to fulfil 55% of the RDA of micronutrients in children (6-72 mo), specifically proteins, lipids, sugars, minerals (iron, zinc, magnesium), vitamins (A, B3, B6) and omega 3 fatty acids. The LNS, Sagar Poshan with improved functionality, was accepted and approved for production by our Indian Ministry of Food Processors, and has been introduced and supplied through dairy cooperative supply chain in India.
