

Mismatch Defined:
*Matching Technical Quality
with Willingness to Pay*

Noreen's Group

Definition of mismatch

- *Mismatch among stakeholders' perceived value of the intervention*
- *Perceived value is complicated by:*
 1. *Each group's definition of value*
 2. *Each group's assessment of risk*

Other mismatches

Description of other mismatches or issues that you think may belong in other topics

- mismatch between technical efficacy and perceived value
- perception of investment from the community versus perceptions of investment from the intervenors
- risk assessment of professionals versus risk assessment of the receiving population/host community
- mismatch between broader agenda and needs of community in driving the solution/approach
- mismatch between donor need to replicate versus giving people tools so they don't need you anymore
- mismatch between technical quality and individual motivations

Ann's Group

Definition of mismatch

- *Values and Value Systems*
 - “Value” is not necessarily measured in currency alone and may differ for many reasons
 - Aspirational and transactional motivations
 - Identifying actual needs of the beneficiaries helps to develop disruptive (“out of the box”) solution
