

**Academic Challenge 2014**  
**Topic Distribution – Computer Science**

Topic	Regional	Sectional	State
General Computing Knowledge (including topics such as basic computer organization, basic networking, or the world wide web)	4	4	4
Digital Logic, Boolean Algebra, Number Systems	4	4	4
Program Logic	16	15	13
Data Structures & Algorithms	3	4	5
Object Oriented Programming	3	3	4
<b>Total</b>	30	30	30

## NOTES REGARDING CODE ON ALL EXAMS

All syntax for the various commands will follow that used by C++. Some specific items are listed below. For a more comprehensive list, please consult the references listed.

Some reserved words:

for do while switch case break if else struct const

Some data types

int float bool char double

Some operators:

= Used for Assignment

== Used for comparison of equality

/ Division, if two integers are used with this operator, the result is an integer with no remainder

% Modulus, used with two integers, it returns the remainder of the division

\* Star operator, dereferences a pointer to determine the data in which the pointer is pointing

& Address operator, returns the memory location or address of the data

-> Right-arrow operator, used to access structure or class elements of the item in which a pointer is pointing

. Dot operator, used to access structure or class elements of an element of that class

Commands to obtain input from standard input or display to standard output:

cout Prints data to standard output, the monitor unless otherwise specified

cin Reads input from standard input, the keyboard unless otherwise specified

>> used to direct data from standard input to the cin data stream

<< used to direct data from cout to standard output

Note that code segments will be placed in `Courier New` font type as below.

SAMPLE QUESTION USING CODE AS DESCRIBED:

1. What is the output of the following code?

```
int i;
for (i=0; i<4; i++) {
    cout << i << " ";
}
```

a) 1 2 3 4                      b) 0 1 2 3 4    c) 1 2 3 4 5    d) 0 1 2 3 4    e) none of the above
